

ABCDE'S of FALL PROTECTION

Our line of fall protection equipment extends from the same philosophy that has made our ladders preferred by professionals. We begin with **The Werner Product Promise** that establishes our design and ensures satisfaction – before, during and after use. We developed built-in **INSPECT!**[™] and **WebAlert** features that make inspection quicker and easier for users, assuring their safety. Werner fall arrest systems have five main components, **A**nchorage. **B**ody Support. **C**onnectors. **D**escent & Rescue, backed with **E**ducation.

ANCHORAGE

Anchorage devices provide a secure point of attachment (to an existing structure) for the fall arrest system. Anchorage devices can be permanent or temporary and vary to suit the type of structure available.

BODY SUPPORT

Full body harnesses connect the worker to the fall arrest system. They are specially designed to protect the worker against serious injury in the event of a fall whilst also remaining comfortable to wear.

CONNECTOR

Connectors are devices that connect the worker to the fall arrest system. They can be single products or multiple devices working together.

DESCENT/RESCUE

Descent & Rescue systems enable the retrieval of an injured or incapacitated worker. In the event of a rescue, this equipment facilitates rapid recovery of the worker without endangering other workers in the process.

EDUCATION

All employees exposed to fall hazards must receive training by a competent person that addresses the nature of the hazards in the work area. Procedures for erecting, maintaining, disassembling and inspecting fall arrest equipment and use and operation of fall arrest equipment.
